3. Monte Carlo & Risk

Probability-based sustainability analysis.

The plan achieved a Monte Carlo success rate of **71.6%** (95% CI 68.7%–74.3%). Simulations incorporate stochastic market paths, asset-class covariance where available, inflation variability, wellness shocks, and portfolio volatility assumptions.

4. Asset Allocation & Rebalancing

Strategic portfolio structure and optimization diagnostics.

Asset Class	Target
US Equity	55%
International Equity	15%
Fixed Income	20%
Real Assets	5%
Cash	5%

Rebalancing policy prioritizes tax-advantaged accounts, minimizes unnecessary capital gains realization, and supports withdrawal sustainability throughout retirement.

5. Tax Strategy

Lifetime tax minimization and Roth conversion analysis.

The engine evaluates federal taxation, state taxation, IRMAA thresholds, capital gains treatment, and dynamic Roth conversion opportunities.

6. Estate & Legacy Planning

Projected wealth transfer and beneficiary analysis.

Estate projections incorporate beneficiary transitions, inherited retirement accounts, trust structures, and long-term wealth preservation scenarios.
